

G'day Mate

Year 3/4 Home Learning

For the home learning for our new topic called 'G'day Mate', we would like the children to produce a piece of learning about the **physical geography** of **Australia**. Information on 'whereabouts' Australia is in the world; Australian climate and biomes; natural wonders and characteristics; topographical features (including hills, mountains, coasts and rivers), and land-use patterns (farming & industry) could be researched and presented in a variety of ways such as fact files, maps or posters. Please ensure that all work is **no larger than A4** as we have limited space available to store and display the learning. We always love seeing the children's amazing home learning so look forward to seeing what they will produce this time! Due in by: **Monday 30th March.**

Although it may be tempting to produce work on the current tragic bush fires that are happening in Australia, we would like you to focus the children on the areas mentioned as this will support the curriculum learning we will be teaching. We will cover the fires in school as part of the project.

Thanks, year 3/4 team.
